## ANIMATION + PAGE TRANSITIONS

### ANIMATION1

While uploading a new song the sound wave ripples from left to right on the page.

### ANIMATION2

When entering the search page this search icon draws itself and expands.

### ANIMATION3

The buttons transition on hover. They pulsate and invert to the opposite colour.

### ANIMATION4

Between each page the logo draws itself as if a fingerprint was marked on a cold window and disappears in 0.5 seconds.

## OVERVIEW

After looking through the current designs I noticed there was no consistency between the brand identity and these stills. I have taken these dated designs to 2018 integrating subtle animations and a minimalist contrasting colour pallet.

Consistency is important and this is why I have used the same header and style of title on each page.

Good design is sometimes about simplicity, less is more. For example with the 'CRUD' buttons I have switched text with icons. On hover I would like these buttons to display their purpose.

Notices how I have only used the main colours in the theme pallet. Perhaps some of the secondary colours could present themselves on hover of buttons.

Using the midtone grey + the offwhite from the colour pallet for text I have forced the user to distinguish between more and less important information.

The rounded shapes make the design feel soft and playful.

Animation of SVG throughout make any app/website fun and engaging, its like giving the user micro games to keep them engaged.

Fluidity is important so we should create these pages to have smooth transitions like if nothing was loading but transforming into each other.

I would like to think if Yousican used my designs we would have a fun and unique user experience offering and showing unprecedented design.
